

getTextContent

Import contents created in Synap Editor as texts.

Parameters:

Name	Type	Attribute	Description
htmlcode	Boolean	default : false	When there is any emoji, convert it to HTML Character Code in � form.
unicode	Boolean	default : false	When there is any emoji, convert it to Unicode in \u0000 form
remove	Boolean	default : false	When there is any emoji, remove it from the text

Return:

Type	Description
String	Text created in the Editor

Example:

```
var textContent = editor.getTextContent();
if(textContent.trim() !== '') { // Check if the text contents in the Editor consists of blank characters only
    and import html only when there is none.
    html = editor.getPublishingHtml();
}

// Emoji option
editor.getTextContent({
    emoji: 'htmlcode'
});
```
