Automatic Hyperlink Insertion

Automatic hyperlink insertion is the feature that inserts the relevant hyperlink into the text deemed to be a potential hyperlink when Space or Enter key is pressed after the text is entered.

> **Example**
>
> http://, https://, www. + TEXT + Toplevel Domain(.com, .co.kr ...)

By setting 'editor.autoLink' to false, you may disable the feature (default - true).

```
const synapEditorConfig = {
        //...
        /**
         * Determines whether the automatic hyperlink insertion feature is used.
         */
        'editor.autoLink': true,
        //...
};
```
