

Automatic Hyperlink Insertion

Automatic hyperlink insertion is the feature that inserts the relevant hyperlink into the text deemed to be a potential hyperlink when Space or Enter key is pressed after the text is entered.

Example

`http://, https://, www. + TEXT + Toplevel Domain( .com, .co.kr ... )`

By setting 'editor.autoLink' to false, you may disable the feature (default - true).

```
const synapEditorConfig = {
  //...
  /**
   * Determines whether the automatic hyperlink insertion feature is used.
   */
  'editor.autoLink': true,
  //...
};
```
