

openDocumentOnServer

RELEASE 2.4.1 OR ABOVE

API to import a document by entering api and params in the Editor object.

Parameters:

Name	Type	Description
api	String	API to request to the server
params	Object	Parameter to set in the api request
bOverwrite	Boolean	Overwrite during import (overwrite when set to true)

Note) Import Using Absolute Path

You may import a document by receiving the document's absolute server path as params and using that in the server's import logic.

Example:

```
const api = "./importOnServer";
const params = { path: "D:\test.docx" };
editor.openDocumentOnServer(api, params, true);
```
