

openDocumentByURL

RELEASE 2.3.0 OR ABOVE

API to import document by entering URL in the Editor object.

Parameters:

Name	Type	Description
url	string	Document URL

Example:

```
const url = '/resource/test.docx';
editor.openDocumentByURL(url);
```

Note) Editor Initialization through Document Conversion Result

Transfer result data of converting documents in the server (pbData, importPath) when the Editor is initialized.

Example:

```
const pbData = [10, ...]; // PB data received from the server
const importPath = ''; // Path in which the document conversion result exists (it shall be relative path to
which the browser can access.)

//Use initSEModel after generating Editor object.
const editor = new SynapEditor(...);
editor.initSEModel({
  ...
  pbData,
  importPath,
  ...
}) {
  ...
}
```
