

Automatic List Insertion

RELEASE 2.7.0 OR ABOVE

Automatic list insertion is a function where a list is automatically inserted when you enter a space after entering text such as *, -, #, and 1.

You can set the 'editor.autoList' value to false so that the list is not automatically inserted. (Default is 'true'.)

```
const synapEditorConfig = {  
  ...  
  /**  
   * You can set whether to use the function of inserting bullets / numbers with '*', '-', '#', '1. + space'.  
   */  
  'editor.autoList': true,  
  ...  
};
```

editor.autoList: true ()	editor.autoList: false
