

Using HTML List

Bullets and bullet numbers are expressed in different ways in Synap Editor.

If you set it as below, you can use the basic HTML bullet rendering function.

Configuration

Key	
editor.useHTMLList	Sets default HTML bullet rendering.

Example

```
synapeditor.config.js

{
    'editor.useHTMLList': true
}
```

If this option is used as true, multi-level bullets are not supported. It is recommended to use it after removing it from the toolbar.

'editor.useHTMLList': false (default)	'editor.useHTMLList': true
<ul style="list-style-type: none">● 글머리기호 1단계<ul style="list-style-type: none">○ 글머리기호 2단계<ul style="list-style-type: none">■ 글머리기호 3단계 <ol style="list-style-type: none">1. 글머리번호 1단계<ol style="list-style-type: none">1. 글머리번호 2단계<ol style="list-style-type: none">1. 글머리번호 3단계	<ul style="list-style-type: none">● 글머리기호 1단계<ul style="list-style-type: none">○ 글머리기호 2단계<ul style="list-style-type: none">■ 글머리기호 3단계 <ol style="list-style-type: none">1. 글머리번호 1단계<ol style="list-style-type: none">1. 글머리번호 2단계<ol style="list-style-type: none">1. 글머리번호 3단계
