setContentsToPaste

RELEASE 2.10.0 OR ABOVE

Set the html contents to be pasted. It is used to correct and set the clipboard data in the beforePaste event.

Parameters:

Name	Type	Description
html	String	HTML DATA to paste into the editor

Example:

```
editor.setEventListener('beforePaste', function(data) {
        var html = data.clipboardData.html;
        var text = data.clipboardData.text;
        var data = html ? html : text;
        // Process the data to be pasted.
        editor.setContentsToPaste('<h1>Synap Editor</h1>' + data);
});
```
