setCustomUploadFunction

RELEASE 2.10.0 OR ABOVE

Set up a user function for uploading files. When this function is set, the specified user function is called without using the internal file upload logic.

Parameters:

Name	Type	Description
func	Function	User function to be used for file upload.

Example:

```
function customUpload(file, fileType) {
    // File upload processing
    return url;
}

editor.setCustomUploadFunction(customUpload);
```

Define User Function

User upload function should be defined as below.

Parameters:

Name	Type	Description
file	File	File to be uploaded through the editor
fileType	String	File type (image, video, file)

Return:

Type	Description
String	URL or path accessible from browser

Notice) In the user-defined upload function, after uploading the file, the URL (or Path) that can access the uploaded file must be returned.

Example:

```
function customUpload(file, fileType) {
    // File upload processing
    return url;
}
```
