getAPIModelById

RELEASE 2.11.0 OR ABOVE

Returns an APIModel for editing via the API.

Parameters:

Name	Type	Attribute	Description
id	String		

options	Object	{
		
		skipUndoRedo: false,
		
		skipRendering: false
		
		}
			Set options for APIModel.
			
			skipUndoRedo : If this value is true, the result of editing through the model is not undo/redo. Also the old undo/redo stack is initialized.
			
			skipRendering : If this value is true, the results of editing through the model are reflected only in the model and not rendered on the screen. After all edits are done, you need to render them separately via editor.render() method.

Return:

Type	Description
Element	API model for editing

Example:

```
var table = editor.getAPIModelById('ID');
table.insertCol(1);
table.insertRow(1);
table.setWidth(400);
```

skipUndoRedo : true

```
var table = editor.getAPIModelById('ID', { skipUndoRedo : true });
table.insertCol(1);
table.insertRow(1);
table.setWidth(400);
```

skipRendering : true

```
var table = editor.getAPIModelById('ID', { skipRendering : true });
table.insertCol(1);
table.insertRow(1);
table.setWidth(400);

editor.render();
```
