

getHTMLElements

RELEASE 2.11.0 OR ABOVE

Returns an array of HTML Elements based on Selection. If no Selection is specified, returns the HTML Element corresponding to the current Selection.

Parameters:

Name	Type	Attribute	Description
selectionObject	Object	{ anchor: { Position }, focus: { Position } }	[Optional] A selection object with an anchor position and a focus position. If this value is not present, it operates based on the current selection.

Return:

Type	Description
HTML Element []	An array of HTML Elements corresponding to Selection. In the caret state, the HTML Element where the caret is located is returned as an array.

Example:

If selection is not specified

```
var elements = editor.getHTMLElements();  
console.log(elements[0].innerHTML);
```

If selection is specified

```
var selection = editor.getSelection();  
var elements = editor.getHTMLElements(selection);  
console.log(elements[0].innerHTML);
```
