

getHTMLElement

RELEASE 2.11.0 OR ABOVE

Returns an HTML Element based on Position. If Position is not specified, returns the HTML Element at the current caret position.

Parameters:

Name	Type	Attribute	Description
position	Position		[Optional] Position information in Selection. If this value is not specified, it is treated as the current caret position information.

Return:

Type	Description
HTML Element	HTML Element corresponding to Position

Example:

If position is not specified

```
var element = editor.getHTMLElement();
console.log(element.innerHTML);
```

If position is specified using Selection

```
var selection = editor.getSelection();
var startElement = editor.getHTMLElement(selection.start);
console.log(startElement.innerHTML);
var endElement = editor.getHTMLElement(selection.end);
console.log(endElement.innerHTML);
```
