

getTableCellHTMLElement

RELEASE 2.11.0 OR ABOVE

Returns the cell (TD or TH) HTML Element in the table where the caret is located.

Return:

Type	Description
HTML Element	Cells in a table (TD or TH) HTML Element. Returns null if the caret or selection is not located inside a table cell.

Example:

```
var td = editor.getTableCellHTMLElement();
td.innerHTML = "A cell in the table.";
```
