

getSelection

RELEASE 2.11.0 OR ABOVE

Returns Selection information from the editor. Selection information includes four types of location information as follows.

start	The start position of the selection on the document
end	The end position of the Selection in the document
anchor	The location where the selection started (ex; the location where the mouse was clicked in case of darting after clicking the mouse)
focus	Location where selection is finished

Example:

```
var selection = editor.getSelection();

var startPosition = selection.start;
var endPosition = selection.end;
var anchorPosition = selection.anchor;
var focusPosition = selection.focus;
```

Also, Selection is divided into text, cell, and drawingObject according to the selected content type. Depending on this type, the contents of location information are configured differently as follows.

type	position
text	id : Paragraph ID offset : Position of selection in paragraph
cell	id: First paragraph ID included in the cell offset : In the case of anchor position, the position where the selection started within the paragraph tableCellId : Cell ID tableId : Table ID
drawingObject	drawingObjectId : drawingObject ID id : Paragraph ID containing the drawingObject offset : Position of drawingObject in paragraph

In Selection, type information can be checked as follows.

Example:

```
var selection = editor.getSelection();
var anchorType = selection.anchor.getType();
var focusType = selection.focus.getType();
```
