

ListItem

ListItem extends Element

It is the item (LI) model that composes the list of bullets (OL) and bullets (UL).

Methods

- `append(html)`
- `prepend(html)`
- `setHTML(html)`
- `setText(text)`

append(html)

- `html <String>` HTML String to append.

The HTML String passed as an argument is added as a child at the back of the Element.

```
var listItem = editor.getAPIModelById('id');
listItem.append('<span>TEXT</span>');
```

prepend(html)

- `html <String>` HTML String to append.

The HTML String passed as an argument is added as a child to the front of the Element.

```
var listItem = editor.getAPIModelById('id');
listItem.prepend('<span>TEXT</span>');
```

setHTML(html)

- `html <String>` HTML string to set inside ListItem

Sets the HTML string value passed as an argument to the internal HTML of the ListItem.

```
var listItem = editor.getAPIModelById('id');
listItem.setHTML('<p><span>Add HTML. All previously entered information will be erased.</span></p>');
```

setText(text)

- `text <String>` Text string to set inside ListItem

Set the text string value passed as an argument to the internal Text of the ListItem.

```
var listItem = editor.getAPIModelById('id');
listItem.setText('Sample text.');
```
