

Personal Information Protection

RELEASE 2.4.0 OR ABOVE

It is 'Personal Information Protection' plugin that filters personal information such as residential registration number, email address and phone number and masks them with '*'.

How to Use

Loading Plugin File

```
<link rel="stylesheet" href="URL of personalDataProtection.min.css">
<script src="URL of personalDataProtection.min.js"></script>
```

UI

You may add the button to toolbar and menu with '**personalDataProtection**', the name of the plugin.

Adding to Toolbar

```
Editor Configuration

//...
'editor.toolbar': [
    //...,
    'personalDataProtection',
    //...
],
// ...
```

Adding to Menu

Editor Configuration

```
//...
'editor.menu.definition': {
    //...,
    'tools': [
        //...,
        'personalDataProtection',
        //...
    ],
    //...
},
//...
```

API

editor.checkPersonalData(callback)

RELEASE 2.13.0 OR ABOVE

Personal information check is performed and the result is returned to the callback function received as an argument.

Parameters:

name	Type	Description
callback	Function	This is a callback function to receive the personal information check result. The check result is returned as a Boolean . <pre>function (result) { // result value true: pass, false: fail }</pre>

Example

```
editor.checkPersonalData(function (result) {
    if (!result) {
        // If the Personal information check does not pass, open the personal information dialog
        editor.getUIManager().showDialog('personalDataProtection');
    }
});
```
