Formula Editor

RELEASE 2.16.0 OR LATER

This is an equation editor plug-in that allows you to insert equations/chemical formulas and edit properties.

In elementary algebra, the quadratic formula is the solution of the quadratic equation.

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Water is made from two elements - Hydrogen and Oxygen. If you put the two gases together, along with energy, you can make water.

$$2H_2(g) + O_2(g) \rightleftharpoons 2H_2O(I)$$

The entire formula for the surface area of a cylinder is $2\pi r^2 + 2\pi rh$

Use Module

The SynapEditor equation editor plug-in uses a commercial module called MathType.

If you wish to use it, please contact us through the page below.

- Product inquiry: https://www.synapsoft.co.kr/contact/
- MathType: https://www.wiris.com/en/solutions/integrations/html-editors/

How to use

Load plugin file

```
<!-- MathTypeYou need to add the library to use it. (https://www.npmjs.com/package/@wiris/mathtype-
generic#documentation) -->
<script src="url of mathtype-generic/wirisplugin-generic.js"></script>

<!-- SynapEditor Since the object can be applied only when it exists, it must be included under the editor
script file. -->
<script src="url of mathType.min.js"></script></script>
```

Adding a Button to the Toolbar

Equation editing and formula editing buttons can be added to the toolbar area and menu area.

Add to Toolbar

Setting up the plugin

Settting mathType

Sets the properties to be used when initializing the window. Wiris Plugin. Generic Integration object.

```
synapeditor.config.js

//...
'mathType.config': {
    'properties': {
        'configurationService': '/pluginwiris_engine/app/configurationjs'
     }
}
//...
```
